

Homework Assignment 10

Due on Sunday May 7th by midnight via Canvas

SDS 321 Intro to Probability and Statistics

1. (3+3+3+1 pts) Let X_1, \dots, X_n be i.i.d draws from $Uniform([0, a])$.
 - (a) Find the MLE of a .
 - (b) Find the pdf of the MLE. *Hint: you can use your knowledge on how to get the pdf of the max of n i.i.d r.v's.*
 - (c) What is the expectation of the MLE?
 - (d) Is this unbiased, or asymptotically unbiased?
2. (2+3 pts) Let X_1, \dots, X_n be i.i.d draws from $Normal(\mu, \sigma^2)$.
 - (a) Show that the MLE for σ^2 is $\sum_i (X_i - \bar{X})^2 / n$.
 - (b) Use the fact that $\sum_i (X_i - \bar{X})^2 / n = \sum_i X_i^2 / n - \bar{X}^2$ to prove that the MLE you have from above is asymptotically unbiased. *Hint: We didn't get time to do this in class. But this is on the slides for 27th April, lecture 24.*
3. (1+2+2 pts) You have collected the average annual precipitation of Austin from the last 6 years. These are 31.8621 32.6414 32.4491 35.3799 28.5916 35.5605. You can assume that these are independent draws from a normal distribution with unknown mean μ and variance σ^2 . You are trying to test the hypothesis $H_0 : \mu = 35$ and the alternative is $H_1 : \mu \neq 35$.
 - (a) Estimate μ and σ^2 from the above. You can use the MLE of σ^2 to estimate the variance.
 - (b) An oracle told you that $\sigma = 5$. Test the null hypothesis at 5% significance level.
 - (c) You don't know the true σ . Now test the null hypothesis at 5% significance level.
